Laura Malmud is a New Yorker with a creative soul. She's worked with children and the elderly, and designs apps, print publications and websites as well as ongoing projects. Recently, Laura made a beautiful illustrated resume for herself that blew her audience away and she's done the same for others. The latest resume that Laura designed was for a female software engineer. The outlines of the resume were crisp and clean, and a lot of the small details were recreated to ensure Laura's design would look professional. However, did you notice? Laura used some Photoshop tricks to help make the design come alive. She used the Filter Gallery with a variety of filters to add some interesting elements to the design and make it stand out. Originally an educational product, Photoshop has evolved into a powerhouse of creativity. With the creative genius of some of the best users, Photoshop has since become one of the most-used applications in the world. Whether your images are stills, videos or animations, Photoshop is a true workhorse of the creative process, allowing it to handle every aspect of image and video editing. Imagine having all the tools to improve your images–removing unwanted objects, adjusting color, blending photos together, or working with layers–in one powerful tool you're always ready to use, even in the browser. If you've wanted a tool that helps you get results faster with less effort–and that works where you are, then give it a try. Basic image editing tools include the ability to merge or separate layers and define colors on an image. Photoshop's non-destructive editing means that you can easily change or combine parts of an image after it's been created. With an image placed on a layer, you can add elements such as text, shapes, and photos, to the layer. You can add or remove a layer when you edit an image, and rearrange them by dragging them into different layers or stacking them. You can also use different tools to crop the image or to remove unwanted elements and flatten the image. What's new in Photoshop 12 is the ability to create an Animation timeline project. You can drag the photo or video frame into the desired place on the timeline to start creating an animation, or you can make the format ready and add the frames on it directly.
